Contemporary Educational Programs

Dear Colleagues,
we invite you to take part in The Fifth International Summer School

“SPACE BIOLOGY AND MEDICINE”

to be held in Moscow, Russia at June 13 – June 26, 2005.

It will take place for the fifth time and will provide an overview of the main elements of Soviet/Russian cosmonautics. The Schools' disciplines concern the history of cosmonautics, results of the national space programs, biomedical research projects, and cosmonaut safety-dependent engineering problems. A practical part of the course also includes a demonstration of medical supplies found onboard the spaceships such as “Vostok”, “Voshod”, “Soyuz” and space stations “Salyut” and “Mir”.

The School is open for both students and specialists in biomedicine, natural sciences, engineering, and related fields. The program includes lectures from leading Russian specialists, meetings with cosmonauts, visiting museums and national centers (Space Museum, Moscow Mission Control Center, Center of Cosmonauts Training), and a picturesque list of cultural tours.

All classes are delivered in English.

More details you may find at: <http://www.cep.ru>

For all questions concerning the School, please, contact:
Dr Mikhail A. Grafov, Fax +7(095)9567864, 9329828 E-mail: grafov@cep.ru

The Organising Committee acknowledges financial support of INTAS provided to support participation of young scientists from NIS

Attention! The School might be limited by 30 participants.
